

5 facts you should know about ovarian cancer:

1

Ovarian cancer is Australia's most lethal female cancer with a **49% 5-year survival rate**.

2

70% of those diagnosed with advanced ovarian cancer will have a **recurrence within 3 years**.

3

Symptoms of ovarian cancer are often vague making the disease **difficult to detect**.

4

There is **no accurate and reliable early detection test** - a pap smear or cervical screening test does not detect ovarian cancer.

5

Your **family history of cancer is important** when understanding your personal risk of ovarian cancer.
